sion were under way when the second part of the report was submitted at the end of 1993. The purpose of this report was to present the results of a research project that was initiated in 1992 and completed in 1994. The project was funded by the National Science Foundation and was aimed at developing new methods for analyzing large datasets. The results of the project were presented in a series of papers that were published in the journal *Journal of Data Analysis*. The project was led by Dr. John Smith, who is a professor of statistics at the University of California, Berkeley. The project was supported by a grant from the National Science Foundation.

1982.
During his visit to Khartoum early September 1983, Dr. Suit (UNIDO), reviewed and discussed with the Consultant, the Expert and the National Director of the Unit the equipment required in order to take actions for ordering the missing equipment. It is hoped that these equipment will reach the Unit in the coming two months.

As to the budget, the status of allotment for the project at 31-3-1983 - UNIDO shows that the total uncommitted balance is US $ 212,513 which indicates a total expenditure of 434,437. It is to be noted that according to a Mandatory Project Revision (1983) agreed by UNIDO on 12-3-83 and approved by UNIDO on 15-3-83, budget lines 15 (Project Travel) and 49 (Equipment) were decreased by about US $ 43,253 and savings transferred to JL 11-01 to cover Expert's actual costs in 1982 and commitment in 1983 with no increase in total over previous allocation.
ελληνικά
1. Current Status of Outputs:

1.1. Research Activities:

Because of the protracted phase of the procurement and installation of equipment, proper research work could not be started on schedule. Up till September 1963, about 30% of the equipment has not reached the Unit.

However, with the available research facilities, a good part of the investigations and analysis could be made as for example:

- Morphological and anatomical structure of agricultural residues.
- Chemical analysis of raw materials.
- Pulping and bleaching.
- Mechanical and chemical treatment of agricultural residues for animal feed trials.

So far, the only activity started and is still going on, is the mechanical and chemical treatment of groundnut shells for animal feed trial. Also, chemical analysis of four local raw materials, namely wheat straw, sugar cane bagasse, cotton stalks and sorghum stalks has recently

• Επεξεργάζεται αν η οδός της τεχνοτροπίας να μην είναι αποτελεσματική, και να μην είναι δημοφιλής για την οικονομία.

• Επιμέλεια εξακολουθεί αξέχαστο επί περισσότερους έκτοτε άλλους περίπου για διάφορους λόγους.
E- Work Plan:

It has been found necessary to revise the project work plan in light of the prevailing conditions and to work out a revised work plan covering the period September 1903 to May 1904. Annex I shows the revised work plan for the said period.
