PREPARATORY ASSISTANCE FOR THE ESTABLISHMENT OF
A FOOD SAFETY SYSTEM

XP/CMB/94/029

CAMBODIA

Technical report: Assessment of existing safety rules and standards
for food products and presentation of alternate solutions for
establishment of food safety and quality control system

Prepared for the Government of the Kingdom of Cambodia
by the United Nations Industrial Development Organization

Based on the work of M. E. Dauthy,
quality control consultant

Backstopping Officer: A. Ouaoich
Agro-based Industries Branch

* This document has not been edited.
I. EXPLANATORY NOTES

The value of the local currency Cambodian Riel during the period of the mission was 0.0004 US$.

Technical abbreviations

HACCP - Hazard Analysis and Critical Control Points
GMP - Good Manufacturing Practices

Acronyms and local capital letter abbreviations

TDMI - Technical Department, Ministry of Industry (MIME)
MIME - Ministry of Industry, Mines and Energy
MAFF - Ministry of Agriculture, Forestry and Fisheries
MC/T - Ministry of Commerce/Trade
MH - Ministry of Health
ITC - Institut Technologique du Cambodge (Ministry of Education)
SSENV - Secretary of State for Environment
NCRDC - National Committee for the Reconstruction and Development of Cambodia
LEDA - Local Economic Development Agencies
SVIZC - Sihanouk Ville Industrial Zone Committee
II. ABSTRACT

Title of project: Preparatory assistance for the establishment of a food safety system in Cambodia

Number of project: XP/CMB/94/029

The objective of the activity: Prepare a Project Document

The duration of the activity: Two months and 15 days

The main conclusions and recommendations:

1. Safety rules and standards for food products are not in force in Cambodia.

2. The prevailing situation concerning food safety and food quality, mainly in cottage- and small-scale manufacturing units, is critical – with no control of incoming raw materials, processes and finished products.

3. Existing institutions, specifically designed for food quality control are extremely modest in Cambodia and are facing many major difficulties. This situation is largely due to the special country situation in the last 15 years with no external technical assistance in this field.

4. As a result, Cambodia has virtually no way to effectively control local and imported fresh and processed food products.

5. In the actual phase of the country’s reconstruction the need for upgrading quality and safety of the food products is becoming critical and this urges the establishment of a food safety and food quality system and network at the national level.

6. At the national level a coordination system between the several ministries involved in food safety is strongly needed.

7. A food analysis capacity has to be established at the national level, adapted and operated according to the country’s specific needs.

8. Private sector has to be involved in preventing potential food contamination risks and in operating effectively the food safety system.

9. Participation of women in the food quality activities and in the development of the food subsector is necessary.

III. INTRODUCTION

The project activities which gave rise to the report were to formulate a detailed technical cooperation project for the establishment of a food safety and food quality control system in Cambodia.

The specific purposes the report is intended to serve are:

1. Summarize the findings and conclusions related to:
   (a) safety rules and standards for food products;
   (b) prevailing situation concerning food safety;
   (c) existing institutions involved in food quality control.

2. Support the preparation of a comprehensive project document for the establishment of a food safety and food quality control system in Cambodia.

3. Open a new period in the relations between UNIDO and Cambodia after 15 years of country isolation.

The report was written by Mircea E. DAUTHY, UNIDO Consultant, Expert in Quality Control as a result of a mission to Cambodia (XP/CMB/94/029/11-51). Job Description is presented as Annex I.

The activity began on 1st August 1994 and did last for two months and 15 days, including travel and briefing.

The original objectives were:

1. Assess existing safety rules and standards for food products, if any.

2. Contact and discuss with manufacturers and importers the prevailing situation concerning food safety.

3. Compile and analyze data on food trade flows.

4. Assess the resources (human and technical) and the office facilities of existing institutions and determine their ability to effectively control food quality.

5. Analyze the present situation and prepare alternate solutions which should include:
   a. Preparation and/or adaptation of food safety rules and, if deemed necessary, food standards.
   b. Technical aspects concerning the effective control of the quality of foods.
   c. Dissemination of rules and GMP among manufacturers and users.
d. Enforcement aspects.

6. Present and discuss with the authorities the findings and conclusions.

7. Prepare a comprehensive project document, according to UNDP/UNIDO methodology, for the establishment of a food safety system in Cambodia.

The original objectives were not revised. The objectives were attained.
IV. REPORT

A. Activities

1. Introduction to Government officials and project presentation

During the first part of the mission senior counterpart staff introduced the consultant to Government officials at the following ministries:

- Ministry of Industry, Mines and Energy - H.E. the Minister;
- Ministry of Agriculture, Forestry and Fisheries - H.E. the Under Secretary of State;
- Ministry of Commerce (Trade) - Kamcontrol Director;
- Ministry of Health: Food Hygiene Director.

All these ministries have to be somehow involved in the food safety and food quality control system in Cambodia and are actually aware of the gap between the existing situation and the needs for the future. The consultant informed about the specific objectives of the preparatory mission and obtained necessary information and inputs from the officials he met.

2. Assessment of existing safety rules and standards for food products

Throughout the mission this activity was a permanent one and has been performed through following actions:

a) Search for existing written documents: law, decree, subdecree, decisions, internal ministry notes, etc...

b) Meetings with various ministries' staff involved in establishing and/or applying safety rules and standards;

c) Discussions with food processing / manufacturing units staff and management;

d) Visits of food manufacturing units and food services;

e) Visits of local food markets and places where food is prepared (catering units, slaughterhouses, etc.)

3. Contacts and discussions with food manufacturers and importers on the prevailing situation concerning food safety

A list of the food processing/manufacturing units, food services & markets and other facilities visited during the mission is presented as Annex III.

The consultant and Junior (or Senior) counterpart staff visited twenty three various facilities in Cambodia and evaluated:

- the prevailing situation concerning food safety;
- Good Manufacturing Practices;
- potential health hazards / risks for the consumers;
- critical food products' (meat, fish, etc.) handling and storage;
- safety rules and standards for food products.

4. Data on food trade flows/food production/industry

A tiny nutshell information about food production, food trade flow (exports) and a list of the major food manufacturing units is presented as Annexes IV and V. A list of the local food products manufactured in cottage- and small-scale units is in Annex VI.

A very recent and exhaustive document elaborated under the responsibility of the Ministry of Industry, Mines and Energy was obtained and is attached to the report. This document with the title "DATA COLLECTION, 1st semester 1994" contains valuable data about industry in Cambodia and on food production/food trade flows (import/export, etc.).

Two of the consultant’s senior counterpart staff are members of the editing Committee - Sihanouk Ville Industrial Zone Committee / SVIZC.

5. Assessment of the resources (human and technical) and the office facilities of existing institutions and determination of their capacity/ability to effectively control food quality

In order to assess the existing institutions in the field of food quality control, the consultant visited the following laboratories:

5.1 Central Analytical Laboratory, TDUM, Ministry of Industry;
5.2 Kamcontrol Laboratory, Ministry of Commerce;
5.3 Microbiological Laboratory "Institut Pasteur of Cambodia", Ministry of Health);
5.4 Office facilities of the education purpose laboratory, Food Department, ITC, Ministry of Education;
5.5 APSARA, private food manufacturing unit, production laboratory;
5.6 Cambodia Beverage Company, private food manufacturing unit, production laboratory;
5.7 Socapneu laboratory.

During these visits the consultant reviewed in detail the office facilities and technical resources (equipment, methods, etc.) of the existing institutions.

Human resources were also reviewed through discussions with managers, direct contacts with respective laboratory staff and, in
some cases, through detailed evaluation of basic training credentials of the laboratory staff.

In the special situation of TDNI, Ministry of Industry, official project counterpart, a detailed evaluation was performed on: methodology; current analysis programme; existing equipment situation in terms of maintenance, spare parts, etc.; availability of chemicals in Cambodia; actual efforts made by laboratory staff to keep informed about new equipment available outside the country. This information was completed and consolidated with elements from the visits to all other laboratories.

6. Analysis of the present situation and preparation of alternate solutions

This activity was performed in very close cooperation with national counterpart staff.

Analysis of the present situation was followed by preparation of alternate solutions adapted to specific country situation.

These alternate solutions were directed mainly to:

a. Establishment of a coordination system at national level;
b. Elaboration of food standards and technical guidelines, including GMP and HACCP, and enforcement aspects;
c. Providing human and technical resources and office facilities for an analytical capacity for food products at the national level;
d. Training of national staff;
e. Dissemination of rules and GMP among manufacturers and users

All these alternate solutions were summarized in the draft Project Document for the establishment of a food safety and food quality control system in Cambodia.

7. Presentation and discussion with the authorities of main findings and conclusions

The main findings and conclusion were presented in detail and discussed with the authorities of the Ministry of Industry (MIME): senior counterpart staff at TDNI; H.E. the Under Secretary of State and H.E. the Minister of Industry.

Within the framework of a field mission to Cambodia of the UNIDO backstopping officer, Dr. A. OUAOUICH, the consultant participated in presentations and discussions of the main findings and conclusions at the following official meetings:
a) Ministry of Industry staff meeting;

b) Round table with representatives of three ministries (MIME, MAFF and MH), Phnom Penh Municipality and UNDP Programme Officer;

c) Presentation to the UNDP Assistant Resident Representative.

8. Participation in meetings with the donor community

During the mission the consultant contacted actively the donor community in Cambodia (embassies, etc.) and established the basis for future official discussions during the mission of the UNIDO backstopping officer.

The consultant participated in all meetings with embassies and other potential donors at the end of the UNIDO preparatory mission.

9. Preparation of a draft Project Document

A comprehensive draft Project Document, according to UNDP/UNIDO methodology, for the establishment of a food safety system in Cambodia, was prepared and submitted to the UNIDO backstopping officer.
B. Findings and conclusions

Findings

1. Safety rules and technical guidelines for food products, including GMP and HACCP methods, are not in force in Cambodia.

2. Standards for food products have not yet been established in Cambodia.

3. There is no satisfactory legislative background, neither for elaboration of standards and regulations, nor for effective food safety and food quality control activities.

4. The existing institutions are not yet involved in an active way in the formulation and development of food standards and technical guidelines; this situation is due mainly to lack of coordination at the national level and the lack of human and technical resources adapted to the specific needs of the country.

5. In Cambodia there are no industrial support institutions to provide critical services on food safety / food quality control and new food processing technologies.

6. The actual situation in terms of food safety and food quality in production / manufacturing units, mainly in cottage- and small-scale ones, is critical; there are no food quality controls of incoming raw materials, processes and finished products at the manufacturing level.

7. The majority of Phnom Penh’s population depends on prepared food, including the one bought on the street (like ice cream, soya milk, etc.) and on the many popular catering places all over the town, especially in markets. These foods lack quality controls of any form and, as far as family produced ice cream is concerned, one can assume that the "cold chain" has been broken.

8. No organized and permanent control of the quality and safety of food products exists at the national level, neither for locally produced food items nor for imported food products.

9. In Cambodia there are some imported food products that challenge the local products in terms of price and quality. For improvement of the quality of the local food products the establishment of a food safety / food quality system will play a major role.

For the competition in terms of price, the national taxation system plays a major role.

10. Existing institutions, specifically designed for food products control, are extremely modest in Cambodia and are facing the following main difficulties:
a) Lack of recent technical documentation on analytical methods, standards and food regulations;

b) Absence of contacts with the international scientific and technical community;

c) Lack of chemicals for analysis;

d) Few and out-dated laboratory equipment;

e) Lack of spare part for laboratory equipment;

f) Lack of recent practical experience of national technical staff;

g) Absence of any specialized technical assistance from outside.

11. As a result, Cambodia has virtually no way of assessing the quality of local fresh and processed food stuffs nor has it any Good Manufacturing Practices or hygiene rules in force at the manufacturing level.

12. Many manufacturing units face the following negative impacts:

a) Difficulty of obtaining equipment spare parts;

b) Shortage of electricity supply (cut off 5-6 times a day);

c) Lack of modern technology and equipment for production;

d) Difficulty of supplying raw materials, especially from abroad;

e) Inappropriate taxation system for locally manufactured products as compared to imported goods.

13. One main characteristic of food and food supply production is the fact that a very high number of cottage- and small-scale units is contributing to the food subsector production. The most recent figures of the Ministry of Industry indicate that there are about 4,100 cottage- and small-scale manufacturing units for food and food supply.

These units are actually supplying the market without any quality control at the individual or national level. This situation is generating potential quality issues and safety risks.

14. There are a large number of small-scale rice mills (around 1,500 in 1969). Rice-based noodles are produced at the artisanal level (around 20 units). More than 40 units are producing soya-based condiments (mainly soya sauce).

15. Each province has its own ice making facilities. In Phnom Penh there are a large number of cottage / family ice cream production units.

16. The quantities of "manufactured" drinking water are increasing rapidly and the number of processing units for water treatment (by various methods and starting with water from various sources) is in a steady evolution. Both water sources and treatment methods must be a major preoccupation of the future.
13

food safety and food quality control system.

17. At the national level an important fish processing sector exists (using both freshwater and sea fish). The main processed fish products are dried fish, smoked fish, fish paste (prahok) and fish sauce (tuk trey).

18. No organized control of the quality and safety of foods exits at the manufacturing or national level. This fact is creating a lot of problems for the consumers, for the local market and export promotion, and for the potential import substitutes. It led to the actual situation in the country, i.e. where a reliable food safety system does not exist.

19. From the point of view of consumer protection and information, important potential risks are actually existing, since there are many local and imported food products on the market without indication of the manufacturer’s name, production date or "Best before" date.

20. Many food products are sold even without indicating the name of the product on the packaging. Another risk related to consumer’s safety is the fact that many food products are distributed in packaging without any "tamper evidence".

21. Rules related to eventual food products recall/ withdraw in case of major safety risk do not exist; this is mainly due to the fact that lot number identification / code dating does practically not exist.

22. Major food products on the market with large popular consumption - alcoholic beverages, ice bars and cubes, ice cream, "manufactured" drinking water, soya sauce, etc. - are not subject to any safety / quality control at the manufacturing level in the family, cottage- and small/medium-size processing units.

23. No use is made of metal detectors at the manufacturing level even not in medium-scale units; the list of ingredients is also not used, not even for well established products like soya sauce. A "Quality Certification Mark" procedure for local products does not exist.

24. At least four ministries (Ministry of Industry, Ministry of Agriculture, Ministry of Commerce, Ministry of Health) feel involved in food safety. Some official documents are describing partially their respective roles (see Annexes VIII to XII). Due to the lack of human and technical resources and lack of external technical assistance in this field, practical and efficient activities are extremely limited.

25. One problem in food products sub-sector is that organizational structure and premises for coordination and activities in food quality control have not yet been established. The few testing activities are not yet related to an integrated system.
26. The private sector does not have a professional association and is not involved in a food safety system.

27. Women, despite their majority in the country's population and important participation in food production, are neither actively involved in food quality activities nor in the development of the food subsector.

Conclusions

1. Food safety and food quality control is not in force in Cambodia. Food quality / food safety standards and technical guidelines, including GMP have not yet been developed.

2. There are no technical and human resources to contribute to the improvement of the safety and quality of local food products or to encourage export and import substitution by improving the quality.

3. The general and institutional framework for the establishment of a food safety and food quality system is weak. This situation is largely due to the country's special situation in the last years with no external technical assistance in this field.

4. Food safety and food quality control are priorities in Cambodia. In the actual phases of the country's reconstruction, the need for upgrading quality and safety of food products is becoming critical and this urges the establishment of a food safety and food quality system and network.

5. Such a service - a national food safety system - if run efficiently - can lead to more varied, safer and more nutritious diets; local products could substitute costly imports and any necessary imported goods can be closely monitored on the sound basis of national standards and regulations. Beside obvious economic and public health benefits, the advantages in social terms can also be considerable.

6. A coordination system at the national level between all ministries involved in food safety / food quality activities is strongly needed.

7. Within the framework of a food safety and food quality system, a national capacity in food analysis (laboratories) has to be established and operated according to the specific needs of the food subsector in Cambodia.

8. Except a few major food processing industries (as international companies involved in soft drinks and beer manufacturing) the actual situation in terms of food quality / safety in the production units visited during the mission is in a real need of improvement.
9. The actual situation in the storage of dried foods (dry fish, etc) during the wet season and of other food products, indicate that it is also important to pay heed to problems related to packaging and the use of packaging materials.

10. The production of good quality and safe food products in Cambodia needs stressing; care to prevent contamination must be taken from the beginning of the "production process", starting with the quality of the incoming raw materials, to the finished products.

11. The private and public sectors must cooperate in preventing food contamination and in operating an efficient food safety and food quality system.

12. Women have to be involved in food safety and the food quality system and in the development of the food sub-sector.

13. The food safety and food quality system in Cambodia would be integrated within the country's strategy by contributing in an active and efficient way to:
   - improvement of the quality of the local food products;
   - a positive impact on the health of the consumers;
   - promotion of exports;
   - proposal of import substitutions;
   - improvement of the investment climate.

C. Recommendations

1. Finalize a Project Document for a technical cooperation project in Cambodia: "Establishment of a food safety and food quality system" based on the proposed draft. UNIDO

2. Submit the Project Document to some of the potential donors contacted during the preparatory mission. UNIDO

3. Participate in the financing of a project for establishment of a food safety and food quality system in Cambodia and assure coordination with current ILO projects. UNDP

4. Provide national inputs for the operation of a project for the establishment of a food safety and food quality system (according to the Project Document). Government

5. Ensure coordination at national level between the ministries involved in food safety and food quality control activities (see next 2 pages). Government
6. Provide an analytical capacity for food products at the national level (laboratories) according to the local needs. UNIDO

7. Ensure coordination with other international participants in food safety (European Union, etc). Government/UNIDO

8. Encourage the participation of women in food quality control activities and the development of the food subsector. Government/UNIDO

9. Ensure involvement of the private sector in running effectively the food safety system at the national level. Government/UNIDO
PROPOSAL FOR POSSIBLE ROLES OF THE DIFFERENT MINISTRIES IN THE FOOD SAFETY AND FOOD QUALITY SYSTEM IN CAMBODIA

1. IMPLEMENTATION OF REGULATIONS ON:

1.1 SLAUGHTERHOUSE OPERATIONS - MAFF
1.2 GOOD MANUFACTURING PRACTICES IN PROCESSING UNITS - MIME
1.3 HYGIENE RULES AND SANITATION IN CATERING UNITS AND FOOD MARKETS - MC/T and MH
1.4 WEIGHT CONTROL - MC/T
1.5 UTILISATION OF FOOD ADDITIVES / PROCESSING UNITS - MIME
1.6 LABELLING OF PROCESSED FOOD PRODUCTS - MIME and MC/T
1.7 ADULTERATION, MISBRANDING - MC/T

2. ISSUANCE OF LICENSE, UNIT REGISTRATION, CERTIFICATION

2.1 SLAUGHTERHOUSE CERTIFICATION - MAFF
2.2 FOOD PROCESSING UNIT REGISTRATION - MIME
2.3 FOOD PRODUCTS REGISTRATION - MIME and MC/T
2.4 PLANT LICENSE TO OPERATE - MIME
2.5 STANDARDIZATION OF PROCESSED FOODS - MIME and MC/T
2.6 FOOD ADDITIVE REGISTRATION - MIME and MC/T
2.7 PLANT CERTIFICATION - MIME

3. INSPECTION OF FOOD PROCESSING AND FOOD HANDLING AREAS

3.1 SLAUGHTERHOUSES - MAFF
3.2 FOOD PROCESSING PLANTS AND FOOD PROCESSES - MIME and MH
3.3 FOOD MARKETS - MC/T and MH
3.4 RESTAURANTS - MC/T and MH
3.5 FOOD IN MARKETS - MC/T

MIME - Ministry of Industry, Mines and Energy
MAFF - Ministry of Agriculture, Forestry and Fisheries
MC/T - Ministry of Commerce/Trade
MH - Ministry of Health
POSSIBLE COORDINATION OF ACTIVITIES AND MAIN PARTICIPANTS IN A FOOD SAFETY AND FOOD QUALITY SYSTEM IN CAMBODIA

JOB DESCRIPTION

US/CMB/94/029/11-51/07-20AO

POST TITLE: Consultant in the field of quality control of food

DURATION: 2.5 months

DATE REQUIRED: As soon as possible

DUTY STATION: Phnom Penh, Cambodia, with travel inside the country.

PURPOSE OF PROJECT: To assess the present situation of food safety in Cambodia and to prepare a technical assistance project proposal on this matter.

DUTIES: In cooperation with government authorities, the Consultant is expected to:

1. Assess existing safety rules and standards for food products, if any.

2. Contact and discuss with manufacturers and importers the prevailing situation concerning food safety.

3. Compile and analyze data on food trade flows.

4. Assess the resources (human and technical) and the office facilities of existing institutions and determine their ability to effectively control food quality.

5. Analyze the present situation and prepare alternate solutions which should include:
   a. Preparation and/or adaptation of food safety rules and, if deemed necessary, food standards.
   b. Technical aspects concerning the effective control of the quality of foods.
   c. Dissemination of rules and good manufacturing practices among manufacturers and users.
   d. Enforcement aspects.

6. Present and discuss with the authorities his/her findings and conclusions.

7. Prepare a comprehensive project document, according to UNDP/UNIDO methodology, for the establishment of a food
QUALIFICATIONS: Food engineer or food technologist with vast experience in food safety and quality control.

LANGUAGE: English

BACKGROUND INFORMATION: This preparatory assistance project aims at formulating a detailed technical cooperation project for the establishment of a food safety system in Cambodia which will result in the protection of consumers and the promotion of exports. The safety system will involve establishing standards and regulations as well as conducting analytical tests (physico-chemical and microbiological) to ensure the quality of food products.
PROPOSAL FOR FIRST THREE WEEKS WORK

WEEK 1
1.1 Introduction to Government officials: Ministry of Industry, Mines and Energy; Ministry of Commerce; Ministry of Agriculture, Forest and Fisheries; Ministry of Health.
1.2 Meeting with national counterpart staff.
1.3 Establishment of contacts for visiting existing facilities "Priority ONE":
   1.3.1 Central analytical facilities - Technical Department, Ministry of Industry.
   1.3.2 KAMCONTROL - Ministry of Commerce.
(Office space and facilities provision, incl. national secretary)

WEEK 2
2.1 Technical visits (along with national counterpart) to the existing facilities "Priority ONE" - as per 1.3.
2.2 Establishment of contacts to discuss with manufacturers and importers (via Chamber of Commerce, etc).
2.3 Working meeting with relevant Ministries staff about existing safety rules and standards for food products.
2.4 Working meetings with technical staff acting in existing facilities as per 1.3 and 2.1
2.5 Working meetings with national staff involved already in food safety rules and procedures, incl. Good Manufacturing Practices and Weights and Measures.

WEEK 3
3.1 Start collecting data in relevant Government services about internal and external trade and food flows - imports and export, formal and informal food trade, etc.
3.2 Establishment of contacts for visiting technical facilities "Priority TWO": Soft drinks factory; APSARA milk factory; Flour factory; Paddy oil factory; LUBICA-biscuits and crackers factory; fruit and vegetable processing centers (paste, jams, etc.).
3.3 Partial report on facts finding in connection with Government counterpart staff and UNDP Programme Officers.
LIST OF FOOD MANUFACTURING UNITS, FOOD SERVICES & MARKETS AND OTHER FACILITIES VISITED DURING THE MISSION

1. KAMCONTROL LABORATORY - MINISTRY OF COMMERCE/TRADE
2. CENTRAL ANALYTICAL LABORATORY - MINISTRY OF INDUSTRY, TDMI
3. MICROBIOLOGICAL LABORATORY, "INSTITUT PASTEUR OF CAMBODIA"
4. ITC - future food analytical laboratory - MIN. OF EDUCATION
5. SOCAPNEU - laboratory facilities (not in use)
6. SOYASAUCE FACTORY
7. APSARA MILK FACTORY - sweetened concentrated milk from imported powder - incl. analytical & microbiological factory laboratories
8. CAMBODIA BEVERAGE COMPANY, Ltd. - soft drinks: Coca Cola, etc. - incl. analytical factory laboratory
9. S.K.D. - alcoholic beverages, incl. factory analytical laboratory
10. ANKO Brothers Co. Ltd. - ice cream; drinking water
11. EUROTECH - drinking water
12. ASIA FLOUR MILL Co. Ltd. - wheat flour/milling facilities (and a small bakery) - incl. factory "tiny" lab (not in use)
13. PHNOM PENN PIG SLAUGHTERHOUSE
14. PHNOM PENH "CENTRAL" FOOD MARKET
15. PHNOM PENH "O-RUSSEY" FOOD MARKET
16. LOCAL "OPEN AIR" CATERING UNITS
17. "LUCKY" FOOD SUPERMARKET
18. FRENCH BAKERY
19. M.P.P. MODERN PACKAGING & PLASTICS - ice cubes; plastic bottles for drinking water - incl. future portable water analysis analytical equipment
20. CAMBODIA FOOD SERVICE - food service facilities; food importer
21. S.K.H. - vegetable oil extraction & refining plant (not in use)
22. CAMBODIA TOBACCO COMPANY - cigarettes
23. CAMBREW - (storage facility) - soft drinks: Pepsi Cola
ANNEX IV

Vu le Kret 536-CE du 31 Août 1965 portant organisation du Ministère de l'Industrie :

Sur la proposition du Secrétaire d'Etat à l'Economie Nationale, Chargé de l'Industrie :

Le Conseil des Ministres entendu :

ORDONNONS :

Article premier.- Les Krets n° 685-NS du 12 Novembre 1955 et n° 536-CE du 31 Août 1965, fixant l'organisation du Ministère de l'Industrie et des Services y rattachés sont abrogés et remplacés par les dispositions suivantes :

Article 2.- Le Ministère de l'Industrie assure :

- l'organisation, la promotion, l'orientation et le contrôle des activités extractives, industrielles et artisanales dans l'ensemble du Royaume ;

- la tutelle des Sociétés d'Etat et d'Economie Mixte, lorsqu'elle lui est confiée par les lois et règlements en vigueur.

Article 3.- Le Ministère de l'Industrie comprend :

- le Cabinet,
Article 4. - Le Cabinet du Ministre, placé sous l'autorité d'un Chef de Cabinet comprend :

- le Secrétaire particulier,
- le bureau de presse, d'information et de documentation,
- le bureau d'ordre,
- le bureau du budget, du matériel et de la comptabilité,
- le bureau du personnel.

Article 5. - La Direction Générale placée sous la direction d'un Directeur Général comprend :

- la Direction des Mines,
- la Direction de l'Industrie et de l'Artisanat,
- la Direction des Contrôles Techniques,
- la Direction des entreprises publiques et semi-publiques placées sous la tutelle du Ministère de l'Industrie

Article 6. - La Direction des Mines placées sous l'autorité d'un Directeur comprend :

- le bureau des études géologiques,
- le bureau des Mines,
- le bureau des carrières et des matériaux de constructions,
- le bureau des statistiques et programmes miniers,
- le laboratoire de géochimie.

Article 7. - La Direction de l'Industrie et de l'Artisanat placée sous l'autorité d'un Directeur comprend :

- le bureau du plan et de la coordination statistique,
- le bureau des Industries alimentaires, textiles et diverses,
- le bureau des industries chimiques, métallurgiques et mécaniques,
- le bureau de l'Artisanat.

Article 8. - La Direction des contrôles techniques placée sous l'autorité d'un Directeur assure la police technique de l'Industrie; elle veille
à ce que l'activité industrielle ne nuise pas à la population ni ne perturbe le milieu ambiant ; elle contrôle la loyauté des transactions ainsi que la qualité des produits industriels commercialisés.

Elle comprend :
- le bureau des « établissements dangereux, insolubres et incommodes » et de la pollution des eaux,
- le bureau des normes et des contrôles techniques,
- le laboratoire central de l'Industrie.

Le Service National des poids et mesures relève de la Direction des contrôles techniques.

Article 9 - La Direction des entreprises publiques et semi-publiques placés sous la tutelle du Ministère de l'Industrie est placée sous l'autorité d'un Directeur qui coordonne l'activité de ces entreprises, tant au point de vue technique, économique que financier ; elle coordonne les activités des Commissaires du Gouvernement aux fins d'harmoniser la politique générale du Gouvernement avec les pratiques commerciales et industrielles des entreprises.

Article 10. - L'Inspection Générale du Ministère, placée sous l'autorité d'un Inspecteur Général assure les missions qui lui sont confiées par le Ministre.

L'Inspecteur Général est assisté d'un ou de plusieurs Inspecteurs suivant les nécessités de service.

Article 11. - Les fonctions énumérées ci-dessous :
- Directeur Général,
- Inspecteur Général,
- Directeur des Mines,
- Directeur de l'Industrie et de l'Artisanat,
- Directeur des contrôles techniques,
- Directeur des entreprises publiques,
- Inspecteur,
- Chef du service national des poids et mesures,
- Chef de bureau à la Direction des Mines,
- Chef du laboratoire de géochimie,
- Chef du bureau des industries alimentaires, textiles et diverses,
- Chef du bureau des industries chimiques, métallurgiques et mécaniques,
- Chef de bureau à la Direction des contrôles techniques,
- Chef du laboratoire central de l'Industrie,
sont exercées en principe par des fonctionnaires appartenant au cadres des ingénieurs.

Toutefois, à défaut du personnel de ces cadres, les fonctions visées dans le présent article pourront être assurées par les fonctionnaires des autres cadres détachés auprès du Ministère de l'Industrie.

Article 12.- Le Chef de Cabinet,
- Le Directeur Général,
- L'Inspecteur Général,
- Les Directeurs,
- Les Inspecteurs,
and le Chef de Service National des Poids et Mesures, sont nommés par Kret pris sur proposition du Ministre de l'Industrie.

Le Chef du Secrétariat particulier, le Chef du Laboratoire Central de l'Industrie, le Chef du Laboratoire de géochimie et les chefs des bureaux sont nommés par Prakas.

Article 13.- Le Directeur Général et l'Inspecteur Général bénéficient des indemnités des fonctions prévues pour les Inspecteurs des Services Financiers.

Les Directeurs, les Inspecteurs, le Chef de Service National des Poids et Mesures bénéficient des indemnités prévues pour le Directeur des Contributions directes et indirectes et de Régies Nationales du Ministère des Finances.

Le Chef de Cabinet, les Chef des Bureaux, le Secrétaire particulier bénéficient des indemnités de fonctions et de logement prévues par les textes en vigueur pour le Chef de Cabinet, les Chefs de Bureau et le Secrétaire particulier des autres Ministères.

Les Chefs des deux laboratoires bénéficient des indemnités de fonctions et de logement prévues pour les chefs de bureau.

Article 15. - Toutes les dépenses du Ministère de l'Industrie sont imputées au budget national.

Article 16. - Toutes les dispositions contraires au présent Kret sont et demeurent abrogées.

Article 17 - Le Secrétaire d'État à l'Économie Nationale, Chargé de l'Industrie est chargé de l'exécution du présent Kret.

Vivé au Contrôle des Dépenses Engagées le 6-12-67 sous le n° 107.
Le Contrôleur des Dépenses Engagées,

Par le Chef de l'État :
Le Premier Ministre,
Signé: Son Sann
Mr. M.E. Dauthy undertook his mission from 1 August to 15 October 1994. His technical report describes the current situation of food safety and quality control in Cambodia and was taken as a reference basis for the identification of Cambodia’s technical assistance needs in the above fields.

The conclusions and recommendations of the report have been a useful tool for the adoption of an integrated approach to address the issues of food safety and quality control in Cambodia. This is in line with the methodology required by UNIDO for sustainable technical assistance activities.
